JouBeh Technologies Inc. - Offers GTS Data Processing and Posting

(June 17, 2009)

(Dartmouth, Nova Scotia) June 17, 2009 – JouBeh Technologies Inc. is pleased to announce that they are offering Global Telecommunications System (GTS) data processing and data posting through their exclusive partner, Scotia Weather Services, Inc. (SWSI).

The GTS is a network of point-to-point circuits operated by National Meteorological Services, a component of the World Meteorological Organization's (WMO) World Weather Watch. The GTS is utilized around the globe to exchange essential meteorological data. In particular, GTS data is of significant importance to meteorologist, as it enables them to produce more accurate weather forecasts and it also contributes to the overall development of long-term global climate studies.

JouBeh Technologies is a Value Added Reseller (VAR) for Iridium Satellite LLC. JouBeh Technologies is heavily focused on delivering core-modem technology and associated data services to the world's earth sciences community. Iridium Satellite has had enormous success within the scientific community, since it offers cost effective data packages in comparison to government supported constellations. However, the true advantage of Iridium, is that it delivers real-time data from anywhere in the world!

Paul Hill, JouBeh's Sales Manager stated that..., "By working with Mr. Mac MacLeod, president of SWSI, we are able to aid the environmental research and the operational data collection community, in posting their volunteered data. We feel that with Mr. MacLeod's 35 years experience as a professional meteorologist, both in the private and public sector, he appreciates the GTS system and the importance of the information!... "
